Why subscribe to the CRJ?

Bringing different disciplines together for a safer world

Launched in 2004, the Crisis Response Journal, which is published quarterly, deals with all aspects of human-caused and natural hazards, risk, sustainability, resilience, business continuity and security.

Our fundamental ethos is to stand back and analyse the whole resilience landscape, joining up the dots between disciplines, frontline practitioners, analysts, corporate and governmental organisations, researchers and academia.

We do this by highlighting best practice, analysing practical experience and showcasing the very latest technological developments in the field.

When you subscribe to the Crisis Response Journal, you will receive four editions of the journal a year, along with unlimited access to our 17-year archive.

You have the option of **hard copy** - we will mail you each edition - or **online** - where you access the journal digitally. All hard copy subscriptions automatically get online access in addition to the mailed journals.

We also offer institutional, student, corporate and library subscriptions, which are a blend of hard copy and full digital access.

What we do

Share experience & research

- News and incident analysis
- Interviews with leading experts & practitioners
- Distillation of academic research into practical lessons
- Innovation and technology development
- Horizon scanning & forward planning
- Leadership, management and command analysis
- Policing, security, counter-terrorism preparedness and response
- Cybersecurity and crime
- Business continuity, resilience, critical infrastructure protection
- Fire and rescue, medical and other frontline response

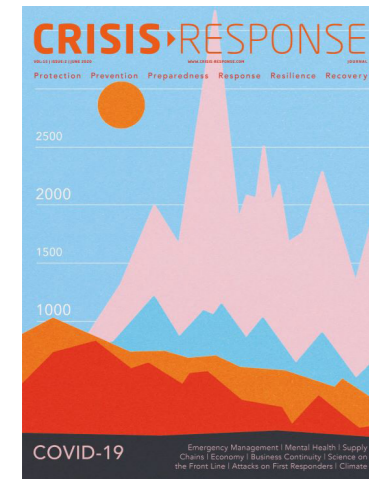

Leadership in Terra Incognita: Vision and action

It is a sad but inescapable fact: today's global situation demands that we try to rest our previous, established and comforting crisis visions and navigations. We must move into the new paradigm, with creative and flexible leadership, says **Emily Hough, Patrick Lagarde and Matthieu Langlois**

The Covid-19 crisis is a time of re-evaluation. There is no time for complacency and knee-jerk reactions. Mapping, preparing, mitigating, future business, recovery, resilience, innovation, including members... all new ideas are needed and must be used. These new paradigms, assumptions and regulations are necessary to the health of our world, the world that we live in and the world that we must create.

It is a sad but inescapable fact: today's global situation demands that we try to rest our previous, established and comforting crisis visions and navigations. We must move into the new paradigm, with creative and flexible leadership, says **Emily Hough, Patrick Lagarde and Matthieu Langlois**

Shaping the future of Artificial Intelligence

The near infinite possibilities of AI seem only to be bounded by human imagination, but how we must ethically principles during its early stages of infancy could have positive or negative repercussions for decades, if not centuries, **Emily Hough** talks to **Shofi** Elayed, AI of Amnesty International, to find out more.

Some of the most exciting and innovative technologies being developed today are those that are powered by artificial intelligence (AI). From self-driving cars to medical diagnosis, AI is transforming the way we live and work. However, as AI becomes more integrated into our lives, it is also raising important questions about ethics, privacy, and security. In this article, we explore the challenges and opportunities of AI, and how we can ensure that it is developed and used in a responsible and ethical manner.

The AI revolution is not just a matter of technology, but of society. As AI becomes more powerful, it is also becoming more complex. This complexity is leading to a growing awareness of the need for ethical principles to guide the development and use of AI. These principles should be based on the values of transparency, accountability, and respect for human rights. They should also be designed to protect the privacy and security of individuals, and to ensure that AI is used in a way that is fair and just.

From my experience, we are only limited in our imagination as to how we can harness this technology.

artificial intelligence

The AI revolution is not just a matter of technology, but of society. As AI becomes more powerful, it is also becoming more complex. This complexity is leading to a growing awareness of the need for ethical principles to guide the development and use of AI. These principles should be based on the values of transparency, accountability, and respect for human rights. They should also be designed to protect the privacy and security of individuals, and to ensure that AI is used in a way that is fair and just.

Unrivalled global content

Joining the dots in the risk and resilience landscape

The Crisis Response Journal, along with its associated channels, is the global information resource that covers all aspects of human-induced and natural hazards, spanning response, disaster risk reduction, resilience, business continuity and security.

We have built a strong and engaged international community. The aim is to bring agencies, disciplines and nations – as well as the private and public sectors – together to increase understanding of their different roles and perspectives, with the aim of improving a unified response to large scale crises, or averting them through effective disaster risk reduction.

We cover a range of threats, from CBRN and cybercrime to conventional terrorism, from pandemic protection and preparedness to flooding, from fires and chemical incidents to large-scale natural emergencies such as earthquakes, from environmental degradation to climate issues, from critical infrastructure protection to business and national continuity, security, resilience, governance, legal and sustainability. We explore new developments in the technology arena, highlighting those that improve preparedness and make response safer and more effective.

CRJ analyses past events to draw vital lessons for the future, while constantly scanning the horizon to identify and help mitigate new threats. It provides a professional global platform to exchange news, experience, and in depth analysis of major incidents, as well as publishing cutting-edge thought leadership pieces and commentaries.

We distil global research, knowledge and experience on disaster risk reduction, crisis management, resilience and continuity, in a dialogue between all disciplines. The ultimate aim is to protect lives, livelihoods and quality of life, to preserve the environment and to safeguard nations, economies and individuals.

Announcing CRJ Volume 14:4

We are hard at work on the next edition of CRJ! For the cover, we wanted to represent a number of trends for the next issue, not least how people are yearning for transparent, honest leadership and scrutiny. And with constant surveillance developing in smart city concepts, how can we safeguard people's well-being? We also examine how to protect ourselves from threats on social media such as blackmail and breaches of online privacy. [Click here](#) for more details
