

The Blue Light Show launches in London

THE BLUE LIGHT SHOW launches this year and is set to become the only cross-collaborative event focused on bringing together emergency services professionals. This must-attend exhibition and conference will take place on June 18-19, 2025, at Olympia London, offering an essential platform to explore interoperability between services, share best practices, and equip professionals with the insights, tools, and skills needed for the future of emergency response.

Uniting the ES community

Designed in collaboration with leading industry figures, The Blue Light Show is transforming the way we respond, protect, and save lives. This dedicated two-day event will bring together frontline responders, senior decision-makers, procurement teams, and suppliers, ensuring that emergency services professionals have access to the latest innovations, training, and networking opportunities.

The Blue Light Show has been created in response to increasing demand for a

sector-wide event that unites the police, fire and rescue, ambulance, coastguard, and search and rescue services in the UK's capital. With the emergency services facing growing operational challenges, from technological advancements to budget constraints, the need for a forum to drive collaboration has never been greater.

Visitors to The Blue Light Show will have access to more than 130 world-class exhibitors. Attendees will meet and interact with leading suppliers and innovators in emergency services, showcasing the latest advancements in equipment, vehicles, communication technology, protective gear, and operational tools designed to enhance frontline efficiency and safety.

The event includes a comprehensive conference programme featuring more than 80 expert-led sessions. The conference will cover critical topics, including leadership development, interoperability, crisis management, fire and rescue advancements, and frontline

mental health and wellbeing strategies. Sessions will be delivered by renowned speakers from across the industry, providing invaluable insights into both current and future challenges.

Attendees will be able to experience live demonstrations and interactive features. The event will host a series of dynamic, hands-on demonstrations, allowing visitors to witness the applications of new technologies. Attendees will engage in live equipment showcases and training simulations, enabling them to evaluate the potential implementation of these products within their own teams.

The event includes immersive training for emergency services, including scenario-based training (SBT), delivered in partnership with City of London Police. This is one of a number of hands-on sessions, transforming the way emergency responders prepare for the pressure of real-world incidents.

The event offers unrivalled networking opportunities, with thousands of

emergency service professionals expected to attend; it is the perfect environment to engage with like-minded peers, build long-term professional relationships, and share experiences on industry best practices. These dedicated networking zones and informal meetups ensure that attendees can make valuable connections with colleagues, suppliers, and key decision-makers.

The Blue Light Show will officially be co-located with the Forensics Europe Expo, bringing greater collaboration and opportunity to public safety, forensics, and law enforcement professionals. By joining these two events together, the aim is to build an essential meeting place for frontline services, forensic science, criminal investigation and emergency response, along with even more innovation and networking opportunities.

The event is proud to be collaborating with the following sector-leading organisations: Blue Light Card Foundation, Asian Fire Service Association, Air Ambulances UK, British Transport Police Federation, City of London Police Federation, Civil Nuclear Police Federation, College of Paramedics, Institute of Search and Technical Rescue, London Air Ambulance, National Independent Lifeboat Association, National Police Healthcare Scheme, National Fire Chiefs Council, The Firefighters Podcast and United Kingdom Rescue Organisation (UKRO).

The Blue Light Show is also delighted to be working with several partners to deliver the following features:

- Emergency Medicine: Haemorrhage Control in partnership with London Air Ambulance;
- First Responder Theatre: In partnership with College of Paramedics;
- Trauma and Extrication: In partnership with London Fire Brigade and UKRO; and
- Rescue at Height: In partnership with Lyon, JCB and Petzl.

Whether you are a frontline responder, a senior leader, a procurement professional, or part of an emergency planning team, The Blue Light Show will provide you with the tools, resources, and contacts you need to enhance your organisation's resilience and effectiveness. Attendees will leave the event better equipped to handle emergencies, adopt new technologies, and build lasting professional connections.

Visitor registration for The Blue Light Show is open. Register for free to attend this exciting new event for emergency services.
